Z201 Ultra High Precision Bulk Metal Z-Foil® Radial Resistors

The Z201 Bulk Metal® Z-Foil resistors are the third in a series of ultra-precision resistors since the first Bulk Metal® Z-Foil resistor was introduced by Vishay in 1962. Each series represents an improvement on the earlier model. The TCR slope of the Z201 is 0.2ppm/°C (-55°C ~ 125°C, 25°C Ref.) and is an order of magnitude better than the original S102C. The Bulk Metal® Z-Foil resistor is the ultimate choice in the most demanding analog applications. The Z-Foil technology provides a significant reduction of the resistive component's sensitivity to ambient temperature variations (TCR) and applied power changes (PCR). Designers can now guarantee a high degree of stability and accuracy in fixed-resistor applications using solutions based on Vishay's revolutionary Z-Foil technology. **Features:** • Non capacitive design • Non inductive: 0.8µH • Drop in replacement for S102C/K **Specifications:** • TCR: ±0.05ppm/°C typical (0°C ~ 60°C), ±0.2ppm/°C typical (-55°C ~ 125°C, 25°C Ref.) • PCR "ΔR due to self heating": ±5ppm at rated power • Load Life Stability: ±0.005% @ 70°C, 2000H at rated power • Electrostatic Discharge (ESD): up to 25,000V • Rise Time: 1.0ns without ringing • Current Noise: 0.01: -40dB • Thermal EMF: 0.1µV/°C maximum, 0.05µV/°C typical • Voltage Coefficient: < 0.1ppm/V • Maximum Working Voltage: 300V • Thermal Stabilization Time: < 1s (nominal value achieved within 10ppm of steady state value) **Applications:** • Precision amplifiers, high precision instrumentation, medical and automatic test equipment • Laboratory, audio (high end stereo equipment) • EB applications, military, airborne and space • Down hole (high temperature)

Power Ratings are based on 25°C case temperature. The case temperature is used to establish the maximum applied power, see Derating Curve. The case temperature measurement is made with a thermocouple contacting the bottom mounting surface of the package (center of heat dissipating surface), with the device mounted on the heat sink with thermal grease or thermal interface material.

Mounting Note: Mount on a smooth, clean, and flat heat sink surface with a thermal interface material such as thermal grease. The entire heat dissipating surface area must be in contact with the heat sink.

Screw Mounting: Mount with a compression washer (Belleville) that provides a force of 150 ~ 300 pounds. The maximum mounting torque to avoid damage to the package is 6 in-lbs (TO-126), 8 in-lbs (TO-220 and TO-247).

Clip Mounting: Recommended Clip Force is 8 ~ 30 pounds applied to the center of the package. The clip should be smooth to avoid any point concentrations of pressure. For more information, please see Digi-Key web site.

Note: The soldering profile must not cause the metal tab of this device to exceed 219°C, therefore this product is not compatible with most lead-free solder reflow processes. Power dissipation on glass epoxy pcb materials (FR-45, G-10) is limited due to the thermal resistance of these materials. For more information, please see Digi-Key web site.

SMT Chip Resistor Arrays

Series TC164, YC122, YC124, YC164, YC248, YC324 and YC358

The resistors are constructed out of a high-grade ceramic body. Internal metal electrodes are added at each end and connected by resistive paste. The composition of the paste is adjusted to achieve an approximate resistance value, then the resistive layer is laser trimmed to the exact tolerance value. The resistive layer is covered with a protective coat. **SPECIFICATIONS**: • Resistance Tolerance: J: ±5% • Temperature Coefficient: ±200 ppm/°C • Operating Temperature Range: -55°C ~ 125°C • Maximum Working Voltage: 50V (YC324 Series: 200V) • Maximum Overload Voltage: 100V (YC324 Series: 500V) • Short Time Overload: 2.5 x RCWV for 5 seconds at 25°C • Rated continuous working voltage (RCWV) shall be determined from RCWV = $\sqrt{P \times R}$ or maximum RCWV listed, whichever is less.

Surface Mount Chip Resistor Arrays

Digi-Reel® RoHS COMPLIANT

The CRA thick film resistor arrays are constructed on a high grade ceramic body with concave or convex terminals. A small package enables the design of high density circuits. The single component reduces board space, component counts and assembly costs.

Features: • Squared corners (CRA12E083 scalloped corners) • 4 and 8 terminal packages with isolated resistors • Lead (Pb)-free solder contacts on Ni barrier layer

Specifications: • Limiting Element Voltage: 50V • Temperature Coefficient: ±200ppm/K • Tolerance: ±5% • Temperature Range: -55°C ~ 155°C • Insulation Resistance: >10⁹Ω

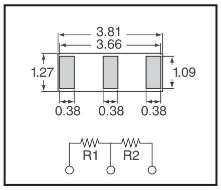
VFCD1505 Bulk Metal Z-Foil® SMT Flip Chip Voltage Divider



Bulk Metal® Z-Foil (BMZF) technology out-performs all other resistor technologies available today for applications that require ultra high precision and ultra high stability. The new Z-Foil technology provides a significant reduction of the resistive element's sensitivity to changes of temperature due to ambient temperature variations (TCR) and to self heating when power is applied (power coefficient). Model VFCD1505 offers low TCR (both absolute and tracking), excellent load life stability, tight tolerance, excellent ratio stability, low thermal EMF and low current noise, all in one package. An absolute TCR of 0.05ppm/ °C removes errors due to temperature gradients. The VFCD1505 surface mount divider provides tight tolerance matching and TCR tracking between two resistors simultaneously etched on one piece of foil on a common substrate. The electrical specifications of this integrated construction offer improved performances and better real estate utilization over discrete resistors and matched pairs.

Features: • Non inductive, non capacitive design • Non hot spot design **Specifications:** • Absolute TCR: ±0.05ppm/°C (typical 0°C ~ 60°C); ±0.2ppm/°C (typical -55°C ~ 125°C, 25°C ref.); Tracking: 0.1ppm/°C typical • Power Coefficient Tracking (ΔR due to self heating): 5ppm at rated power • Short Time Overload: ±0.005% (50ppm) • Load Life Stability (0.1W @ 70°C, 2000h): Absolute: 0.01%; Ratio: 0.005% • Electrostatic Discharge (ESD): up to 25,000V • Power Rating @ 70°C: entire package: 0.1W, divided between the two resistors proportionally to their value • Maximum Working Voltage: 22V • Thermal EMF: 0.05µV/°C typical • Current Noise: < -40dB • Rise Time: 1ns without ringing • Non inductive: < 0.08µH • Voltage Coefficient: < 0.1ppm/ V • Thermal Stabilization Time: < 1s (nominal value achieved within 10ppm of steady state value) **Applications:** • Instrumentation amplifiers • Bridge networks • Differential amplifiers • Ratio arms in bridge circuits • Medical and test equipment • Military • Airborne

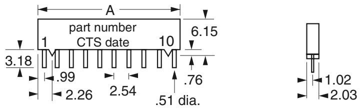
VALUES AVAILABLE

RoHS Compliant parts Available

750 SERIES

Single-In-Line



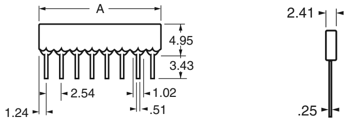
Solid ceramic networks are more efficient because they operate at lower temperatures. This translates into long term reliability in a resistor network.

Specifications:
• **Resistance Tolerance:** ±2% • **Temperature Coefficient:** ±100PPM/°C typical

Features:
• Low-profile construction • Excellent power dissipation • High reliability • Alumina substrate

770 SERIES

Single-In-Line Conformal



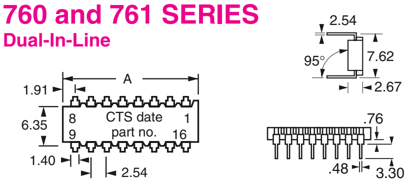
Standard Products 770 series is available in 6, 8, and 10 pin sizes, and in many available resistance values.

Specifications:
• **Resistance Tolerance:** ±2% • **Temperature Coefficient:** ±100PPM/°C typical

Features:
• High reliability resistors • Low-profile construction • .100" lead spacing • Alumina substrate

760 and 761 SERIES

Dual-In-Line

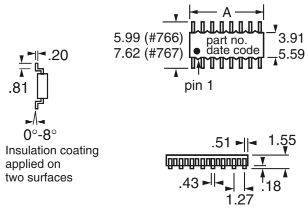


Requires 30% less board space than molded networks of the same power rating.

Specifications:
• **Resistance Tolerance:** Standard: ±2% • **Maximum Operating Voltage:** 50V not to exceed rated power • **Temperature Coefficient:** 100Ω through 1MΩ ±100PPM/°C typical, Below 100Ω ±200PPM/°C typical • **Operating Temperature Range:** –55°C ~ 125°C • **Dielectric Strength**: 100V

766 and 767 SERIES

Dual-In-Line Surface Mount

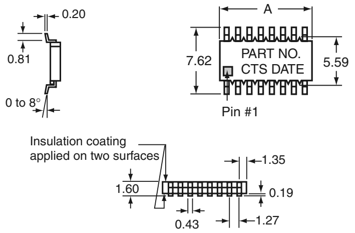


Thin cover coating generates higher power ratings. Thin proprietary cover protection keeps resistors near the surface, allowing the alumina substrate to act as a heat sink. That means higher power ratings than molded networks.

Specifications:
• **Resistance Tolerance:** ±2%. • **Temperature Coefficient:** ±100PPM/°C typical

768 SERIES

Dual-In-Line Surface Mount



Medium body, small outline products. Low profile — board to network clearance of 0.075"/0.005".

Specifications:
• **Resistance Tolerance:** Standard: ±2% or 0.5Ω (whichever is greater) • **Maximum Operating Voltage:** 50V not to exceed rated power • **Temperature Coefficient:** Standard: 100Ω to 1MΩ ±100PPM/°C typical, 10Ω to 99Ω ±200PPM/°C typical • **Operating Temperature Range:** -55°C ~ 125°C • **Dielectric Strength:** 100VAC

Features: Anodized precision machined aluminum exterior. Accommodates potentiometer shaft - 1/4" (6.35mm) with 3/8" x 32-NEF-2A bushing. Requires only one square inch of panel space.

400 Series: 1" (25.40mm) **10 Turn Calibration**. This world class turns-counting dial is designed for multi-turn potentiometers up to ten turns or other rotary devices. The knob/scale attaches directly to the shaft, and the body of the dial is mounted rigidly to the panel, therefore, accurate readings with a ratio of 1000 to 1 for ten turns are provided with no backlash or reading error. Available with or without locking mechanism.

500 Series: 1" (25.40mm) **1 Turn Calibrated scale.**

600 Series: 1" (25.40mm) **1 Turn Uncalibrated dial.**

3400 Series: 7/8" (22.23mm) **20 Turn Calibration.** Calibrated dial designed for multi-turn potentiometers up to twenty turns or other rotary devices. The turns counting digit appears in the window as the dial is rotated. Mounting bracket plate is installed between panel and panel nut, with the dial mounting directly to the potentiometer shaft.

Panasonic® "ZNR" Transient/Surge Absorbers Type D and E

Features: • Excellent clamping voltage characteristic and fast response time (50nsec.) when subjected to impulse surges. Eliminates the discharge lag that is indurative of gap-type arrestors. • Bilateral and symmetrical V-1 characteristic curve. The ZNR can, therefore, be used both in AC and DC circuits, for protection of either positive or negative transients. Panasonic ZNRs are zinc oxide nonlinear resistors whose resistance changes as a function of the applied voltage. The ZNR has a bilateral and symmetrical V-1 characteristic curve and can therefore be used in circuits in place of back-to-back zener diodes. This gives your circuit clamping protection in either direction. The ZNR thus provides a highly reliable and economical way to protect against repeated high voltage transients and surges such as those produced by lightning, switching surges and noise spikes.

Ratings: Varistor Voltage: The voltage between two terminals with the specified measuring current CmA DC applied is called Vc. The measurement shall be made as fast as possible to avoid heat affection.

Maximum Allowable Voltage: The recommended maximum sine wave voltage (rms) or the maximum DC voltage that can be applied continuously.

Withstanding Surge Current: The maximum current within the varistor voltage change of 510% with the standard impulse current (8/20µ second) applied one time.

Maximum Clamping Voltage: The maximum voltage between two terminals with the specified standard impulse current (8/20µ second) illustrated.

V Series: ZNR Surge Absorbers Type D, Series V, have been put on the market as a result of the development of a new ceramic material composition, higher quality of parts and materials used in the varistor and an improvement of manufacturing process control. They have a smaller size but a larger surge current and energy ratings so that they can be used in smaller equipment and exhibit their excellent surge protection ability in severe conditions. **Features:** • Improved in "Surge Current Handling Capability (@ 8/20 µs, 2 times)" by 1.6 to 3.0 times over the current conventional type. • Very large "Energy Handling Capability" absorbing transient overvoltages in compact sizes • Varistor voltages 250V-1850V are listed under UL1414, UL1449 and CSA 2221 01, varistor voltages 82-150V are UL1449 only • Wide products range for transient/surge protection on AC 100V to AC 480V nominal system with the maximum peak current ratings of 600A to 6500A (@ 8/20 µs, 2 times) • Operating Temperature Range -40°C ~ 85°C

Multilayer Varistor — For High Speed Signal Lines

Panasonic's newly developed Multi-Layer Chip Varistor EXJ-P0V080 Series reduces ESD suppression voltages at very low threshold voltages. It's clamping effects are reduced by 50% over existing models. It's multilayer construction and enhanced properties have enabled the EZJ-P to be used as a viable alternative to zener diodes and capacitors in high speed signal designs (i.e.: 1 EZJ-P can replace 2 zener diodes and 1 capacitor). This is achieved by providing new ceramic materials with precise crystal particle uniformity and distribution. The EZJ-P series MLCV is available in a 0402 case size with capacitance values of 330 ~ 680pF. It meets IEC61000-4-2 standard and is ideal for USB-2.0, IEEE1354 and HDMI applications.

Varistors (MOVs) Radial Leaded — C-III, LA, ZA and UltraMOV™ Series

Dim. in mm

The **C-III Series** and **LA Series** of transient voltage surge suppressors are radial leaded varistors (MOVs) that are designed to be operated continuously across AC power lines. These UL recognized varistors require very little mounting space.

The **ZA Series** of transient voltage surge suppressors are radial leaded varistors (MOVs) designed for use in the protection of low and medium voltage circuits and systems. *These devices are not UL, CSA, VDE or CECC certified.*

The **UltraMOV Series** are designed for applications requiring high peak surge current ratings and high energy absorption capability. The varistors are primarily intended for use in AC line voltage applications or other products that require voltage clamping of high transient surge currents from sources such as lightning, inductive load switching, or capacitor bank switching.

Features: (LA and ZA Series) • Lead Material: Tin-Coated Copper wire • Insulating Material: Cured, flame retardant red epoxy polymer meets UL94V-0 requirements • Device Labeling: Marked with LF, voltage, UL/CSA logos, and date code **Specifications:** • Temperature Coefficient of Clamping Voltage at Specified Test Current: <0.01 %/°C • Hi-Pot Encapsulation Coating Isolation Voltage Capability, (Dielectric must withstand indicated DC voltage for one minute per MIL-STD-202, Method 301): 2,500V, (C-III Series 5,000V) • Operating Ambient Temperature Range: -55°C ~ 85°C • Coating Insulation Resistance: 1,000MΩ *Note: See data sheet for detailed Agency Approvals.*

CeraDiodes
Standard, High Speed and Arrays

Due to the ongoing miniaturization, electronic devices are becoming more and more sensitive to ESD. Therefore, reliable protection components become absolutely necessary to safeguard valuable electronics against the impact of ESD. CeraDiodes are ceramic semiconductors optimized specifically for high performance in ESD applications. They have a non-linear voltage/current characteristic for effectively suppressing extremely fast voltage transients and offer superior parametric stability over the complete operating range of -40°C ~ 85°C. CeraDiodes are bi-directional devices. A single CeraDiode connected from signal/data line to ground routes positive and negative ESD transitions safely to the ground plane. This technique eliminates the need to route ESD charge into the power plane, possibly damaging nearby integrated circuits **Features:** Bi-directional ESD protection to IEC 61000-4-2 level 4 • No de-rating of maximum ratings up to 85°C • Extremely fast response time of < .5ns **Applications:** • EDP products (desktop and notebook computers) • Peripherals (printers, memory) • Portable handheld products • Mobile communication • Consumer products (flat TV's, set-top boxes, MP3 players, digital cameras, etc).

ETFV Series
Thermofuse Varistors

The Epcos Thermofuse varistors of the ETFV series combines a disk varistor with a thermofuse. The thermofuse is connected to a terminal lead of the disk varistor by a solder bridge. If a sustained supply-frequency over-voltage occurs, the varistor absorbs the over-voltage and heats up in the process. If the melting point of the thermofuse solder is exceeded, the latter opens and the disk varistor is permanently disconnected from the power line. This disconnection assures that the varistor is not overloaded and short-circuited. **Applications:** UPS, White Goods, Power Suppliers, AC Panel Protection modules, Dimmers **Specifications:** UL1449 and UL60691

BOURNS® Gas Discharge Tubes

Dimensions in Inches (mm)

Gas Discharge Tubes (GDTs) are used to protect personnel and sensitive equipment from hazardous transient voltages. Bourns GDTs are used in primary and secondary applications and can withstand multiple applications of high surge current energy in excess of 25KA. Bourns offers standard 8mm GDTs and a 5mm mini series GDT in two and three electrode versions featuring long service life and low capacitance and insertion loss. An optional, proprietary Switch-Grade Fail-Short is offered on the three electrode versions to provide superior protections from thermal runaway.

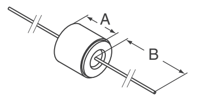
Thru-Hole Surge Arresters — GDTs



AC120 and AC240 Series: Specifically designed for protection on the AC line voltages for a high degree of surge protection in AC powered equipment. UL1449 recognized, CSA approved. **CG, CG2 and CG3 Series:** Designed for a high degree of surge protection at a very low cost. Use the CG series for protection of test and communication equipment where low voltage limits and extremely low arc voltages are required. UL recognized, CSA approved (CG3 Series). **SL1011A Series:** This series provides high levels of protection against fast rising transients in the 100V/µs range usually caused by lightning disturbances. This series also features ultra low capacitance (typically 1pF or less) making them ideal for the protection of high-speed transmission equipment. These devices are extremely robust and are able to divert a 5,000A pulse without destruction.

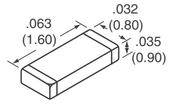
AVX ***NEW!*** USB Series Varistor

Dim. in Inches (mm)



USB Series varistors are designed to protect the high speed data lines against ESD transients. They have very low capacitance and fast turn on times that make this series ideal for data and transmission lines with high data rates. The unique design enables these devices to meet the rigorous testing criteria of the IEC 61000-4-2 standards. New and improved manufacturing process has created these USB series to be one of the best plated varistors in the market today.

UltraGuard Series – ESD Protection for Low Leakage Requirements

Faster semiconductor clock speeds and an increasing reliance on batteries as power sources have resulted in the need for varistors that exhibit very low leakage current. The UltraGuard (UG) Series of AVX Transient Voltage Suppressors address this problem. The UG Series is the ideal transient protection solution for high clock speed integrated circuit applications, battery-operated device, backlit display, medical/instrument application, low voltage power conversion circuits and power supervisory chip sets. UltraGuard's low leakage characteristics are also suitable for optic circuits like LDD, SerDes, and laser diodes.

TISP4CxxxH3BJ Series – Bidirectional Thyristor Overvoltage Protectors

This device is designed to limit overvoltages on the telephone line. Overvoltages are normally caused by A.C. power systems or lightning flash disturbances which are induced or conducted on to the telephone line. A single device provides 2-point protection and is typically used for the protection of 2-wire telecommunication equipment (e.g. between the Ring and Tip wires for telephones and modems). Combinations of devices can be used for multi-point protection (e.g. 3-point protection between Ring, Tip and Ground). These devices are housed in a surface mount SMB (DO-214AA) package.

The protector consists of a symmetrical voltage-triggered bidirectional thyristor. Overvoltages are initially clipped by breakdown clamping until the voltage rises to the breakover level, which causes the device to crowbar into a low-voltage on state. This low-voltage on state causes the current resulting from the overvoltage to be safely diverted through the device. The high crowbar holding current prevents D.C. latchup as the diverted current subsides.

Overvoltage Protection Regulator and Inrush Limiter

The LT®4356 surge stopper protects loads from high voltage transients. It regulates the output during an overvoltage event, such as load dump in automobiles, by controlling the gate of an external N-channel MOSFET. The output is limited to a safe value thereby allowing the loads to continue functioning. The LT4356 also monitors the voltage drop between the VCC and SNS pins to protect against overcurrent faults. **Features:** • Stops High Voltage Surges • Adjustable Output Clamp Voltage • Overcurrent Protection • Wide Operating Range: 4V ~ 80V • Reverse Input Protection to -60V • Fault Latchoff (LT4356-3)

Teccor® SIDACtor® Product
Surge Protection

Product Description: SIDACtors are solid state crowbar devices designed to protect telecom equipment during hazardous transient conditions. Capitalizing on the latest in thyristor advancements, with a patented ion implant technology. This technology ensures effective protection to meet telecommunications regulatory requirements

Operation: In the standby mode, SIDACtors exhibit a high off-state impedance eliminating excessive leakage currents and appearing transparent to the circuits they protect. Upon application of a voltage exceeding the switching voltage (Vs), SIDACtors will crowbar and simulate a short circuit condition until the current flowing through the device is either interrupted or drops below the SIDACtors holding current (IH), once this occurs, SIDACtors will reset and return to their high off-state impedance.

PTC Thermistors —
PTO, YM120, YQS and YS Series

PTC (Positive Temperature Coefficient) Thermistors are thermally sensitive resistors made of polycrystalline ceramic materials. They are characterized by an extremely large resistance change in a small temperature span.

- All PTC resistances ±30% at 25°C
- Tolerance on transition temperature is ±7°C

YM120 Series: This range of PTC thermistors is designed to operate at main voltages and is intended for general purpose usage in over-current, over-voltage and direct over-temperature protection.
Each device in the range consists of a disc of barium titanate thermistor material with silvered faces and solder coated copper lead wires. A painted finish is applied which is not intended to confer insulating properties.

Surface Mount PTC Thermistors

For Overload Protection

The component consists of a high-performance PTC ceramic disc mounted in a lead-frame, for direct soldering onto a printed-circuit board (PCB) or substrate. The ceramic is soldered to the lead-frame by a local reflow process, during which the solder layer is melted to the metallized ceramic surface using a low residue flux.

Features: • Ideal for pick-and-place circuit assembly • Low mounting height • Suitable for reflow soldering • Small ceramic diameter for faster response • Low heat transfer to substrate • Flat terminations for stable positioning and good solderability

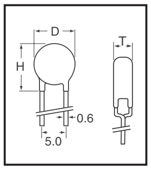
Leaded PTC Thermistors –
Overload Protection for Telecommunication



Advanced developments in telephone equipment in recent years have radically altered the protection requirements for both exchange and subscriber equipment. The range of Positive Temperature Coefficient (PTC) thermistors includes devices specially designed to provide overcurrent protection.
Features: • Fast protection against power contact faults • Withstand high overload currents of up to 10A • High voltage withstanding capabilities for the larger sized thermistors • Good tracking over a wide temperature range for all matched or binned types • Excellent stability over extended time • All telecom PTCs are coated with a high temperature silicon lacquer (UL94V0) to protect them from any harsh environments and to improve their lifetime

Accu-Guard® SMD Thin-Film Fuse

Digi-Reel® RoHS COMPLIANT

The Accu-Guard series of fuses is based on thin-film techniques. This technology provides a level of control on the component electrical and physical characteristics that is generally not possible with standard fuse technologies. This has allowed AVX to offer a series of devices which are designed for modern surface mount circuits which require protection.

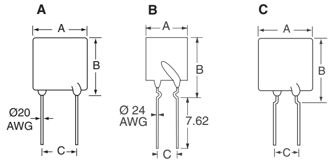
Raychem™ PolySwitch™ Resettable Devices

PolySwitch resettable devices help protect electrical and electronic circuits against excessive current, voltage, and temperature. After switching, the PolySwitch device is latched into its high-resistance, protective state by the small, sustained self-heating current. The device will reset only after it has cooled and the fault condition has been corrected, thus avoiding continuous cycling that could cause circuit damage. The device requires no manual resetting or replacement.

Definitions: • **Maximum Voltage:** The highest voltage the device can withstand (in its tripped state) without damage. • **Hold Current:** The maximum continuous current that will not cause the device to trip at 20°C. • **Trip Current:** The minimum continuous current that will cause the device to trip at 20°C. • **Maximum Current:** The largest fault current, at rated voltage, the device can interrupt without being damaged. • **Maximum R:** Maximum non-tripped resistance of the device.

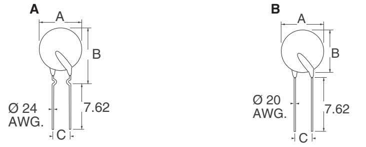
Fig. 1 — RGEF and RHEF Series



RHEF070 ONLY

This product series can be used in a wide variety of automotive, computer and general electronics applications. The RGEF devices feature high current carrying capability (up to 13 amps) in a small package with fast trip times.

Fig. 2 — RXEF Series

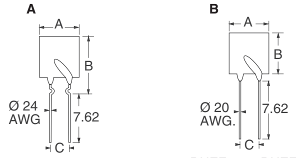


RXEF005 - RXEF090

RXEF110 - RXEF375

These products function as the general purpose line of circuit protection devices and are well suited for power supplies, alarm systems, speakers, motors and many other applications. The RXEF series range in hold currents from .05 ~ 3.75 amps and complement the RUEF devices by providing a higher voltage rating.

Fig. 3 — RUEF Series



RUEF090 - RUEF250

RUEF300 - RUEF900

These devices are also suitable for use in a wide variety of general electronics applications. They complement the RXEF series by providing a smaller form factor with lower resistance and higher hold current capability (up to 9 amps).

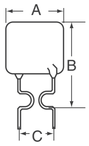
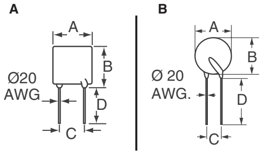
Fig. 4 — RTEF Series



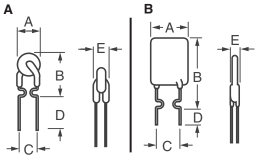
RTEF series devices are suitable for use in IEEE-1394 applications.

Fig. 5 — LVR/ LVRL Series



Polyswitch LVR/LVRL devices can be used for overcurrent protection in line voltage 120/240 VAC applications. Compliant with UL 1434 safety standards

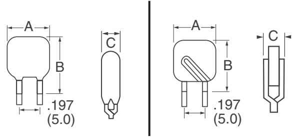
Fig. 6 — RUSBF Series



PolySwitch RUSB(F) devices help meet USB and safety agency requirements. The RUSB(F) family of leaded resettable devices offers overcurrent protection for USB applications.

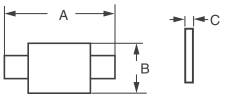
Fig. 7 — TR/TRF Series

A – Encapsulated **B**



These product families help provide protection against damage caused by power cross and power induction surge as defined in ITU, Telcordia, and UL.

Fig. 8 — SRPF Series



These products help provide reliable, non-cycling protection for rechargeable batteries. Weldable nickel leads and a narrow, low-profile design make these devices extremely easy to install on the edges of battery packs.

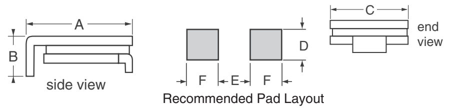
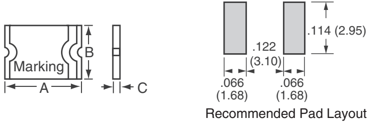
Fig. 9 — SMDF Series



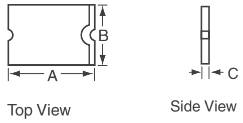
This product series can be used in surface mount applications. The products range in hold currents from 0.3 amps ~ 3.0 amps and voltages from 6 volts ~ 60 volts. These devices are suited for high density board applications in computer and computer peripheral products, telecommunications and general electronics applications. They can be re-flowed onto a PCB using standard surface mount processes. Packaged per EIA-481 standard.

Fig. 10 — miniSMDF Series



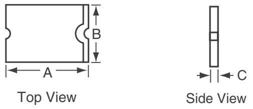
The small size of the miniSMDF devices make them a suitable choice for keyboard and mouse ports, SCSI devices, battery packs, PC cards and sockets, cellular modems and phones, and portable electronic equipment. SMT packaging for automated assembly compared to SMD the miniSMD offers: 40% reduction in size, 300% faster time to trip, 50% reduction in DC resistance, 66% reduction in profile, 80% reduction in mass and drop in replacement for the NANO 2 device in many applications.

Fig. 11 — microSMDF Series



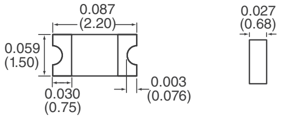
This product series can be used in surface-mount applications. Its smaller component size enables installation on crowded printed circuit boards and in small end-user devices such as digital cameras, personal digital assistants (PDAs) and palm-top computers. The new low hold current devices are suitable for helping to protect industrial sensors and data acquisition systems.

Fig. 12 — nanoSMDF Series (1206 Footprint)



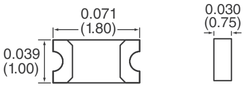
Offering a fast time to trip, the nanoSMDF series is available in a 1206 footprint. Its smaller size helps save board space and cost. These devices are also suitable for high volume electronics assembly.

Fig. 13 — picoSMDC Series (0805 Footprint) ***NEW!***



The picoSMD(C) series can be used in the latest generation of high frequency data ports, I/O ports and storage. The device's small size, fast time-to-trip, and low power dissipation make it a logical and innovative solution for high-density circuit board designs.

Fig. 14 — femtoSMDC Series (0603 Footprint) ***NEW!***



The femtoSMDC series can be used in the latest generation of high frequency data ports, I/O ports and storage devices. The device's small size, fast time-to-trip, and low power dissipation make it a logical and innovative solution for high-density circuit board designs.

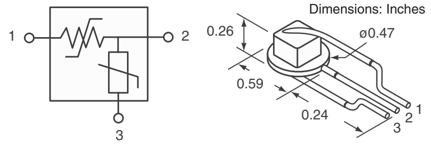
Raychem™ 2Pro™ Devices



The 2Pro product is an integrated overcurrent/overvoltage protection device. The component incorporates Polyswitch PPTC (polymeric positive temperature coefficient) and metal oxide varistor technology in a single device. The 2Pro device helps provide current limiting during overcurrent events, and voltage clamping during overvoltage events. After a fault condition is removed and power is cycled, 2Pro devices will reset so that equipment remains operational. 2Pro circuit protection devices help manufacturers comply with global safety standards, including UL 60950, TIA-968-A, IEC 60950, and ITU-T K.20/K.21. The UL 497A listed protector also helps provide ESD protection.

Raychem™
PESD and SESD Devices

The Raychem PESD and SESD electrostatic discharge protection devices provide exceptionally low capacitance, and they perform better than other comparable components in transmission line pulse (TLP) testing, as well as IEC61000-4-2 testing, especially after multiple hits (up to 1000). The devices offer a lower trigger voltage and a lower clamping voltage than typical polymer ESD devices, resulting in improved protection of sensitive electronic components.

Polyfuse® PTC Resettable Devices Surface Mount

PTC Resettable devices utilize a unique polymer-based, Positive Temperature Coefficient (PTC) material to protect electrical circuits against overcurrent conditions.

PTC Resettable Operation: In normal operation, the Littelfuse PTC has many conductive paths and a very low resistance. In an over-current condition, the temperature of the polymer material rises. This dramatically reduces the conductive paths resulting in an immediate rise in resistance. In this condition the device provides circuit protection by significantly limiting the flow of current. However, once the cause of the initial overcurrent condition is eliminated, the Littelfuse PTC cools down and resets to a low resistance value permitting the normal current flow to resume.

Specifications:

Electrical Definitions:

• **Ihold:** Hold Current: Maximum current device will pass without tripping in 20°C still air • **Itrip:** Trip Current: Minimum current at which the device will trip in 20°C still air • **Vmax:** Maximum voltage device can withstand without damage at rated current (Imax) • **Imax:** Maximum fault current device can withstand without damage at rated voltage (Vmax) • **Rmin:** Minimum resistance of device in initial (un-soldered) state • **R1max:** Maximum resistance of device at 20°C measured one hour after tripping or reflow soldering of 260°C for 20 seconds

Operating Temperature: -40°C ~ 85°C
Maximum Device Surface Temperature in Tripped State: 125°C

Devices are not intended to be used for continual, repeated tripping.

Note: *See data sheet for detailed Amperage Safety Approvals.*

CAUTION: *Operation beyond the specified ratings may result in damage and possible arcing and flame.*

Note (1): The product is 100% tested for 30Vdc operating voltage at 25°C. Continuous operation with higher than 12Vdc under extreme temperature and humidity may cause increasing leakage current and/or shifting device resistance. However, even under severe environmental test, characteristics of the device did not change up to 12Vdc operation.
Note (2): Some shifting in characteristics may occur when tested over several hundred ESD pulses at very rapid rate of 1 pulse per second or faster.
Note (3): Per IEC 61000-4-2, 30A @ 8kV, level 4, clamp measurement made 30ns after initiation of pulse, all tests in contact discharge mode.
Note (4): Trigger measurement made using Transmission Line Pulse (TLP) method.
Note (5): PolySurg devices are capable of withstanding up to a 15kV, 45A ESD pulse. Device ratings are given at 8kV per Note 2, unless otherwise specified.

Radial PC-TRON® Subminiature Fuses

Characteristics: • Offers short-circuit performance which until now could only be found in much larger size glass tube fuses. At 250Vac, the 1/2 to 3 amp PC-Tron can safely interrupt 50 amperes; at 125Vac the 1/2 to 5 amp versions can interrupt 10,000 amperes. This makes the PC-Tron subminiature fuse ideal for line-side protection of power supplies.

Time Current: • Carry 100% of rating for 4 hours minimum; open at 200% of rating in 10 seconds maximum

Construction Material: • Body: High temperature plastic • Leads: Tin plated copper

Note: See data sheet for detailed Amperage Safety Approvals

Encapsulated Thermal Switches

Encapsulated Thermal Switches are ideal for sensing the temperature of a surface or of stagnant air in an enclosure. Available with PC pins or with flexible wire leads for remote installation. Their high temperature resistance and high dielectric strength make it ideal for protecting heatsink-mounted semiconductors. Other applications would be protecting power supplies, or simply turning on a fan at a desired temperature.

Current Sensitivity: The thermal switches are not current sensitive at rated currents. At loads above the rated values, up to maximum loading there is self-heating of the current carrying contacts.

Insulation Resistance: Leads to Earth: 2500V @ 25°C, 1500V @ 100°C. Across open contacts, dependent on response temperature: 500V eff. AC.

Marking: Response temperature in clear text (5°C steps). Normally Closed = blue or black (epoxy); Normally Open = red (epoxy)

Bi-metal Cutouts / Temperature Regulators

The thermal response works a bimetal snap element electrically connected to the switch contact. The switch system is current insensitive. The thermal switches react only to external thermal effects. Double contacts ensure high switch performance and long service life. The housing, base, and the mounting brackets are voltage-free (Standard version: base and mounting brackets are aluminum-plated steel). Heat transfer occurs directly through the metallic base via convection, radiation and conduction in gaseous and solid media. The mounting flange is floating and can be rotated to any desired position with respect to the electrical terminals.

Please note: Reset temperature will be between 5°C ~ 50°C below the standard response temperature.

ADVANTAGES:

• High pressure resistance • High response sensitivity • Numerous applications • Various housings, connections and mounting styles

TS3 Series Moxie® Thermal Sensors

Moxies are variable resistance NTC thermal sensors having a highly specific "transition region". Within this transition region the devices exhibit a coefficient from -40%/°C ~ -200%/°C. Below the transition region they exhibit a linear "thermistor" characteristic of -2%/°C ~ -4%/°C.

Technical Data: • Maximum Allowable Operating Temperature: 120°C • Minimum Allowable Operating Temperature: -40°C • Maximum Allowable Operating Voltage @ 25°C: 125VAC • Maximum Allowable Operating Power (Any Temperature): Normal use less or equal to 0.5mWatt • Insulation Strength (Between Leads and Cap): 600VDC • Conductors: Gold plated leads

Note: Please see data sheet for additional electrical characteristics.

YGM Series PTC Thermistors

PTC thermistors act as thermal protection for electrical machines, and are well known particularly as motor-protectors. PTC thermistors have a non-linear resistance/temperature response, and at a specified temperature the resistance changes rapidly to a very high value.

NOTES:

1. **Rated Functioning Temperature** (UL: TF, CSA, VDE, BEAB: Tf). The temperature at which a TCO changes its state of conductivity to open circuit with loading detection current only. Tolerance: ▽ : ±7°C; UL, CSA, VDE, BEAB: 0 / -10°C
2. **Functioning Temperature**: (Fusing-off temperature): The functioning temperature at which a TCO changes its state of conductivity to open circuit in the ambient air oven which increases temperature by 1°C per minute and with loading detection current of 0.1A or less.
3. **Maximum Operating Temperature:** The maximum temperature at which a TCO can be maintained while conducting rated current for 3000 h.
4. **Holding Temperature** (UL: TH, CSA: Th, VDE, BEAB: Tc). The maximum temperature at which a TCO can be maintained while conducting rated current for 168h which will not cause a change in state of conductivity to open circuit.
5. **Maximum Temperature Limit** (UL: TM, CSA, VDE, BEAB: Tm) The maximum temperature at which a TCO can maintain its mechanical and electrical properties without closing again for 10 minutes after a TCO has changed its state of conductivity.

ATR Thermal Circuit Breakers

Thermal circuit breakers from Sensata Technologies, AIRPAX® brand features a trip mechanism of the circuit protector is designed to open the contacts in the event of a current flow in excess of the rated current and in accordance with the time/current characteristics of the device. A bimetal strip deflects and releases the latch mechanism when heated by an overload. The strip has the advantage of being immune to high inrush currents and line transients.

Includes mounting hardware.

Weidmüller

Branch Rated/Supplemental Circuit Protection

Weidmuller's DIN-rail mounted circuit breakers are available for use in applications where circuit protection must be able to distinguish between circuit overloads and short circuits. Each circuit breaker has the ability to be reset without the need to change components. Circuit breakers in the 9926 Branch Rated Series are UL489 Listed and CSA Certified as branch rated protection devices under CSA 22.2 No. 5-02. The hydraulic magnetic trip mechanism offers 10,000A of interrupting capacity. Breakers in the 9926 Supplement Rated Series are UL1077 recognized.

Mounting Options: If the product is not vertically mounted in the normal DIN-rail mounting orientation, a rating factor must be applied. The published curves for these circuit breaker products are produced with the circuit breaker in the vertical mounting position. The rating factor only applies to the must hold and must trip points of the curve as the other parts (instantaneous trip point) stay largely unaffected.

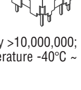
Unimec™ Basic Switch Modules



The Unimec switch range is one of the smallest two pole switches available today. The contacts are capable of producing eight functions depending on the PCB layout. The Unimec switch is available in momentary and alternate action models with standard silver contacts or optional gold contacts for low level switching. All Unimec switches are available in low or high temperature models. **Electrical Specifications:** • Contact Resistance: 100mΩ • Insulation Resistance: >10MΩ • Recommended Load: 250mA / 120V / 9W AC / 6W DC **Mechanical Specifications:** • Standard Actuation Force (Switch): Typical 2.5N • Key Travel (Switch): 1.8mm • Life Time: Momentary 1,500,000 cycles; Alternate 500,000 cycles (Low Temperature); Momentary >10,000,000; Alternate 5,000,000 cycles (High Temperature) **Temperature Range:** Working Temperature: • Low Temperature -40°C ~ 75°C; • High Temperature -40°C ~ 160°C • Environmental Endurance IEC 68-2-3: Sealing IEC 529: IP-54

Environmentally Sealed Keypads 700 Series

The 700 Series of sealed keypads intended are for use individually or as modular building blocks to create more complex key-panel layouts. Unlike other sealed keypads, the 700 series have excellent tactile characteristics providing fast and reliable data input. When a keytop is depressed a conductive rubber pill makes contact with a gold plated PCB. These contact materials provide the highest level of protection against corrosive atmospheres and contact oxidization. Each keypad has interchangeable keytop legend tiles. Keypads come in two colors, gray or black, and feature a matrix style output. Instructions and pinouts are included. Compatible with Storm Universal Encoder part number "MGR1602-ND".

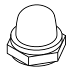
Pushbutton Switch Boots



APM's sealing boots are designed to protect your switches and potentiometers from hostile environments without compromising or interfering with the switches basic function. Boots create a full environmental seal even under high-pressure washdowns. Each seal is made from a tough, high tear strength elastomer that is resistant to most chemicals, lubricants, acids and solvents. UL and CSA recognized which facilitate easier agency listings and most Hexseals meet MIL-B-5423 specs.

NKK SWITCHES Process Sealed Miniature Toggle Switches

M2T Series: Interior bushing is sealed with O-ring which surrounds the actuator. Bushing and top of the housing are one molded piece, achieving the exterior seal. Ultrasonic welding is used to seal the bushing unit to the base. Terminals are epoxy sealed for safeguarding the switch at the base. **Features: • Electrical Capacity:** Logic Level (code G): 0.4VA maximum @ 28V AC/DC maximum. **• Dielectric Strength:** 1,000VAC minimum between contacts; 1,500VAC minimum between contacts and case. **• Mechanical Life:** 100,000 operations minimum **• Electrical Life:** 50,000 operations minimum for gold **• Operating Temperature Range:** -30°C ~ 85°C
B Series: Sealed body construction permits switches to be subjected to time- and money-saving automated soldering techniques. Can be safely cleaned of flux without fear of compromising operating characteristics. **Features: • Electrical Capacity:** Logic Level: 0.4VA maximum @ 28V AC/DC maximum **• Dielectric Strength:** 500VAC minimum **• Mechanical Life:** 100,000 operations minimum for On-On and On-Off-On **• Electrical Life:** 50,000 operations minimum **• Operating Temperature Range:** -30°C ~ 85°C
G3T Series: Ultra-miniature size allows high density mounting, and extremely light weight of 0.6 gram makes these switches ideal for handheld equipment. Combination of design features achieves total seal and allows automated processing techniques, including flux cleaning procedures: one-piece bushing and housing, rubber seals surrounding actuator and base, epoxy at joint of case and base, and molded-in, epoxy sealed terminals. **Features: • Electrical Capacity:** Logic Level: 0.4VA maximum @ 28V AC/DC maximum **• Dielectric Strength:** 500VAC minimum **• Mechanical Life:** 50,000 operations minimum **• Electrical Life:** 50,000 operations minimum **• Operating Temperature Range:** -30°C ~ 85°C
